JSFX?

JSFX isn't actually a thing. It's just something to call me and Cleggy who are making effects for ourselves along with the PCB layout ninjitsu of Jason (Jubal81-ApetoneFX). Some of those PCBs might make it out into the wild so I thought I'd do some docs for them.

YORKSHIRE PULSE

OVERVIEW

This is the first of Jason's layout where he acknowledged the area of outstanding natural beauty that is Yorkshire in it's name when presenting the layout to us.

This is CJ's Shoot the Moon Tremolo (it in itself a derivative of the Tremulous Lune), with Réj's many mods all added in, all on the new layout to make it nice and easy to build.
